

Environmental Sciences

General Information

Modern society began to become aware of the environment in the 2nd half of the 20th century. Environmental awareness was quickly introduced in all social sectors until it led to the current situation. Today, the environmental problem is among the most important issues of all social factors: political, economic or legal institutions, media, groups of citizens, etc.

Unlike other disciplines, **Environmental Sciences have a broadly multidisciplinary nature**, covering fields as diverse as experimental, legal, economic, social sciences, and engineering.

Objectives:

- To receive a multidisciplinary education in the different scientific, technical, social, economic, and legal aspects of the environmental problem.
- To provide basic knowledge and skills to enable access to employment in the field of environmental protection.
- To specialize at technical, teaching, and research level in each of the main disciplines related to the environment.

Career Opportunities
